An Algorithmic Framework for Systematic Literature Reviews: A Case Study for Financial Narratives

Dear Editors,

Thank you for the constructive feedback provided during this second review. We have carefully addressed each comment through targeted revisions focusing on consistency, theoretical anchoring, and the strengthening of concept-centric synthesis. In particular, the manuscript now includes a structured synthesis using the Theory–Context–Method framework, improved alignment between research questions and screening methodology, and explicit bounding of the study’s scope as a framework contribution demonstrated through a financial narratives case study.

A complete point-by-point response is provided in the accompanying document, and all modifications have been highlighted in the revised manuscript.

We respectfully submit the revised version for your consideration.

Sincerely,

Gabin Taibi
